

## Beko beats the fresh food blues

**BEKO has introduced its first cooling product to feature blue light protection technology in the fridge section to prolong the life of fresh produce.**

The GNE114610X four-door fridge-freezer uses blue light to continue the process of photosynthesis for the fresh fruit and vegetables stored in the crispers. Beko says this helps maintain freshness and increases vitamin content.

This model offers a gross storage capacity of 21.5 cu ft (fridge 13.6 net/ freezer 5.4 net) and has fingerprint-proof stainless-steel doors. It measures 925mm x 1,810mm x 740mm (W x H x D).

Details include a multifunctional frost-free freezer that has a "flex zone" compartment (lower right) that can be easily switched to act as a fridge, chiller, wine cooler

compartment or a freezer using the touch-control digital LCD display.

The A-rated fridge has two chiller compartments for meat and fish and two large salad crispers.

This model is expected to retail at around £1,200.

## Ixos Divo – not just for your iPod

**THE metallic Ixos Divo sound system claims to be more versatile than your run-of-the-mill one-box iPod docking system but simpler than a complex hi-fi system.**

Its multipurpose design is intended to improve the sound from almost any modern flat TV and work seamlessly with iPods, MP3 players and computers.

The Divo 2.1 music system, which retails around £229.99, is designed for those who want both quality sound and to combine several audio sources (TV, iPod, CD player, games consoles, laptop computer) through one sound system.

The 3.5mm auxiliary input allows con-

nectivity with nearly all portable music devices, laptop and desktop computers and its mini-tower speakers can be placed away from the separate subwoofer for a wide stereo spread.

The machine is supplied with two lengths of Ixos speaker cable (4.5m and 0.5m) to allow for a variety of set-up options, plus a remote handset.

System frequency response for the Divo is quoted as 20Hz to 20kHz and total system power is rated at 48W (RMS).

## Gorenje's hi-tech energy saver

**GORENJE claims its 7kg condenser tumble dryer, the D72325/BK, uses hi-tech electronics to achieve its class-leading B energy rating.**

This machine is said to achieve a 1.3 per cent energy saving over existing C-rated models.

Its large capacity and delayed start option mean that users can dry a large amount of washing while taking advantage of less expensive energy tariffs.

Electronic controls, an LED program indicator and the options of sensor or timed drying are among details for this machine.

It offers 12 programs, including three for synthetics, five for cottons and one for mixed fabrics. There is also a 20-minute refresh program for freshening clothes and the drum is illuminated to help ensure that no items are left behind.

There is also an anti-crease option at the end of the drying program.

The machine, which is available in white or black livery and measures 600 x 850 x 600mm (W x H x D),

can be stacked on top of a washer using an appropriate stacking kit and can also be plumbed in.

It has a front-mounted filter for easy access and an electronic service diagnostic system that allows for a quick diagnosis when a service call is required.

Retail price is expected to be between £350 and £400, including a two-year parts-and-labour guarantee.

## OmniMount gets back to Basics

**OMNIMOUNT has launched a range of wall mounts that can hold screens up to 70in and weighing up to just over 90kg.**

The three-model VideoBasics range is said to have an ultra-low 19mm mounting profile, which, says OmniMount, is just far enough from the wall to allow for easy connectivity, while still allowing for proper cooling.

The mounts are said to be easy to install and are available in three sizes – VFM, VFL and VFX – to carry flat panels from 23in to 70in and weights up to 90.7kg. Prices are around £55, £65 and £80 respectively.

Made from heavy-grade steel, the mounts have all been UL listed. This means that they have been tested and approved to hold more than four times their published weight capacity, OmniMount claims.

"With panels getting lighter and thinner, we saw the need for a complementary mounting solution," said Alex Robertson, OmniMount senior vice-president of sales and marketing.

"By coupling this appropriately thin design with an installer-friendly single wall plate, we expect installers and consumers alike to love this new offering."
